Key words: *Trichomanes speciosum* Willd., sporophyte, gametophyte, habitat,
distribution, abundance, ecology, north-western France

ABSTRACT

With the aim to establish a conservation plan for the endangered *Trichomanes speciosum* Willd. in northwestern France, the “Conservatoire Botanique National” of Brest has carried out field work to collect appropriate information about this species. In particular, the data available about the type of habitat, abundance and ecology, as well as the threats for the gametophyte and sporophyte stages, were updated.
